

CONTENTS

Introduction	
<i>Carlos M. Duarte</i>	13
1. Nutrient Pollution, Eutrophication, and the Degradation of Coastal Marine Ecosystems	
<i>Scott W. Nixon and Robinson W. Fulweiler</i>	23
1.1. Introduction	25
1.1.1. Some definitions	26
1.1.2. Organic loading from sewage and industrial wastes	27
1.1.3. Nutrient enrichment	28
1.2. Nitrogen and eutrophication in coastal marine systems	30
1.2.1. The oxygen problem	33
1.3. Why nitrogen is difficult to control	35
1.3.1. Sources are irreplaceable, complex, and widespread	35
1.3.2. Nitrogen moves in many forms and many ways	42
1.4. Some concerns for the future	45
Acknowledgements	52
References	52
2. Loss of Seagrass Meadows from the Spanish Coast: Results of the Praderas Project	
<i>Núria Marbà</i>	59
2.1. Introduction	61
2.2. Seagrass meadows: <i>Posidonia oceanica</i>	62
2.3. Ecological functions of <i>Posidonia oceanica</i> meadows	66
2.4. The state of Spanish coastal seagrass meadows: how big is the decline?	69
2.5. Causes of the decline in Mediterranean seagrass meadows	73
2.5.1. Eutrophication	73
2.5.2. Alteration of coastal sediment balance and mechanical perturbations	76
2.5.3. Rising sea temperature	77
2.5.4. Biological invasions	79
2.5.5. Pathogenic organisms	80

2.6. The future of seagrass meadows	82
Acknowledgements	84
References	85
3. Global Trajectories of Seagrasses, the Biological Sentinels of Coastal Ecosystems	
<i>William C. Dennison</i>	89
3.1. Introduction	91
3.2. Seagrasses are unique	92
3.3. Seagrasses are widespread globally	95
3.4. Seagrasses provide key ecological services	96
3.5. Seagrasses are biological sentinels	98
3.6. Seagrasses are threatened	99
3.7. Seagrasses have a “charisma gap”	100
3.8. A global seagrass conservation effort is needed	102
Acknowledgements	105
References	105
4. Global Losses of Mangroves and Salt Marshes	
<i>Ivan Valiela, Erin Kinney, Jennifer Culbertson, Emily Peacock, and Stephen Smith</i>	107
4.1. Introduction	109
4.2. The magnitude of wetland losses	112
4.2.1. Magnitude of mangrove forest losses	113
4.2.2. Magnitude of salt marsh losses	114
4.3. The causes of wetland losses	116
4.3.1. Salt marshes	116
4.3.1.1. Losses from construction projects	116
4.3.1.2. Losses from sea level rise	116
4.3.1.3. Losses from salt marsh die-back	120
4.3.1.4. Losses from invasive reed expansion	122
4.3.2. Mangrove forests	123
4.3.2.1. Construction and exploitation effects	123
4.3.2.2. Sea level effects	124
4.4. The consequences of coastal wetland loss	125
4.5. The restoration of coastal wetlands	132
References	133
5. Confronting the Global Decline of Coral Reefs	
<i>Terry Hughes</i>	139
5.1. Introduction	141
5.2. Shifting baselines, history, and the fossil record	143
5.3. Biogeography hotspots and conservation priorities	145
5.4. Functional groups, redundancy, and biogeography	146

5.4.1. Overfishing: impacts on foodwebs and the functioning of ecosystems	149
5.4.2. No-take areas	150
5.5. Water quality	153
5.6. Climate change	154
5.7. Two case studies	157
5.7.1. The Caribbean	158
5.7.2. The Great Barrier Reef	160
5.8. Future prospects	161
References	163
List of Photographs	167
List of Illustrations	171
Index	173
About the Authors	177
